Work Experiences _____

AiChat Pte, Ltd

Location: Jakarta/Singapore (Remote)

Date: March 2022 - Now

Position: Front End Developer

Activites:

- Reporting in daily scrum
- Discuss with product team to develop new features
- Fixing bugs
- Collaborate with team to enhance and improve project code
- Work with backend developer to make features run effectively

Projects:

- SMS Broadcast:

  Engineered a feature to broadcast campaigns via SMS, expanding our reach and enhancing our marketing efforts.

- Email Ticketing:

  Implemented a new email channel for our ticketing module, improving customer service and response times.

- Hubspot Integration:

  Successfully integrated our CMS system with Hubspot CRM, automating the capture of form leads and streamlining our sales process.

- FB Recurring:

  Developed a feature to manage subscription messages for our Facebook Bot, enhancing user engagement and retention.

- Geo-Location:

  Created a feature to whitelist/blacklist widgets based on geographical location, providing a more personalized user experience worldwide.

- Conversation Enhancement:

  Innovated a feature to create tickets directly from the conversation module, simplifying the user journey and improving efficiency.

- Ticketing Enhancement:

  Developed a feature to manage notes for ticketing conversations, enhancing communication and record-keeping within our team.

Astronacci International

Location: Jakarta

Date: August 2020 – March 2022

Position: Web Developer

Activities:

- Develop web apps for company needs
- Develop landing page for ads
- Provide client database for other division

- Create scalable code and reusable components
- Assist team in fixing bugs
- Discuss and collaborate with team to give proper business solution using technology

Projects:

- A-Club Super Web App:

  Led the development of the web version of Aclub Super App, adhering to design patterns provided by the UI/UX team. Utilized React, Redux, and TypeScript to create engaging modules such as blogs, video lists, and PDF lists.

- Landing Page "Belajar Fibonacci":

  Crafted a company landing page using CSS, Bootstrap, and JavaScript, providing an engaging and informative platform for visitors.

- Landing Page "Price Action":

  Developed another company landing page using CSS, Bootstrap, and JavaScript, further showcasing my versatility in creating diverse web experiences.

- Landing Page "Sucor":

  Created a landing page for "Sucor Sekuritas" using Bootstrap, JavaScript, and PHP for API development, demonstrating my ability to work with various technologies.

- The Tradepreneur:

  Built a single-page website using Bootstrap, JavaScript, and Expression Engine to provide educational videos and screen participants before taking a quiz, enhancing user engagement and learning.

- Aclub Database Management:

  Developed a database management system for a company division using Laravel, Rest API, JavaScript, and Bootstrap, improving data saving, distribution, collection, and provision to other divisions.

- Fun Quiz:

  Created a web-based quiz about forex and stocks using PHP, JavaScript, Ajax, Bootstrap, and MySQL, providing an interactive and educational platform for users.

- Ashop V2:

Enhanced the payment system of Ashop by adding a voucher feature, building a simple API, and integrating it with Midtrans, improving the user shopping experience.

- Forexflix:
  Developed a web app platform using modern web technologies to provide educational videos about forex trading, contributing to user knowledge and engagement.
- Risk & Management Calculator:
  Developed a web-based calculator system to organize risk and management of stocks investment, providing users with a valuable tool for investment planning.

TuvNord (Freelance)

Location: Jakarta (Remote)

Date: November 2021 – February 2022

Position: Front End Developer

Activities:

- Develop dashboard UI using React
- Follow redux pattern from previous developer
- Assist team in fixing bugs
- Work with backend developer to make data flow be served properly

Projects:

- Simcal Dashboard Development:
  Spearheaded the development of a comprehensive dashboard system for Simcal, tailored to meet specific requirements. Leveraged React.js and Redux for state management, delivering a robust and responsive user interface that enhances data visualization and user interaction. This project underscores my ability to understand client needs and translate them into effective, high-performing web solutions. 🚀
